

Which lung protective modes can I use to treat patients with ARDS?

Pressure control

Bilevel mode

APRV mode

Initial settings

P high	20–30 cmH ₂ O
T high	4–6 sec
P low	0–5 cmH ₂ O
T low	0.2–0.8 sec

APRV mode

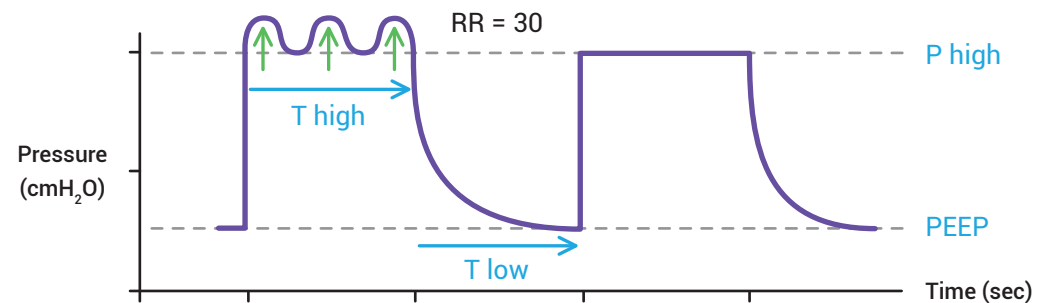

APRV mode is a lung protective mode that can be used to treat patients with ARDS.

APRV

Bilevel

+ Pressure support

APRV

1. Set P high/P low. (No pressure support.)
2. Set T high (traditionally set longer).
3. Set T low (traditionally set shorter to prevent lung deflation).

Bilevel

1. Set P high/P low (PEEP).
2. Set T high (T low*).
3. Set RR.

*T low is automatically determined based on T high and RR.
