

# Screening before weaning

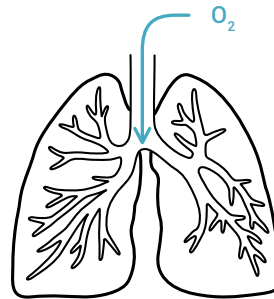

What should I screen before weaning my patient?

Before weaning you need to screen your patient to make sure they meet the following criteria.

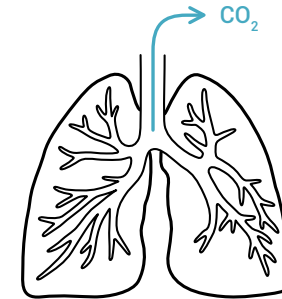

## 1. Oxygenation status

$SpO_2 \geq 90\%$  on  $FiO_2 \leq 40\%$   
 $PEEP \leq 5 \text{ cmH}_2O$

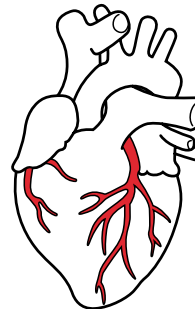

## 2. Ventilation status

< 35 breaths / minute

## 3. Hemodynamic status

No active myocardial infarction  
No (or low) vasopressor infusion

## 4. Sedation status

No neuromuscular blocking agents
